

FOR IMMEDIATE RELEASE

ONSITE POWER SYSTEMS AND PURELY ORGANIC PRODUCTS ANNOUNCE THEY HAVE AGREED TO FORM A JOINT VENTURE TO IMPLEMENT ORGANIC WASTE CONVERSION PROJECTS TO PRODUCE HIGH VALUE ORGANIC FERTILIZER PRODUCTS.

FRESNO, CA, April 8, 2011 - Onsite Power Systems and Purely Organic Products announced today they have agreed to form a Joint Venture Agreement that is structured to implement organic waste conversion technologies that produce renewable energy fuels and multiple high value organic fertilizer products.

The Onsite Power Systems anaerobic high solids digester technologies converts virtually 100% of problematic food and green waste materials into renewable biofuels and multiple high-value organic fertilizer products. The process diverts these waste products from the landfill and converts them into value added products, which ultimately reduces the toxic emissions common in landfills. The Joint Venture with Purely Organic Products brings immediate product lines and current customer base for these high-value organic fertilizers.

“Many agricultural and landscape operations across the county are looking for reliable alternatives to petro-chemical based fertilizers” said Dave Konwinski, CEO of Onsite Power Systems, “The value added products from our digester technologies include nutrient rich liquids and high-value soil amendments that provide a substantial opportunity in the agricultural and landscape organic fertilizer market.”

“Whether we distribute to turf & ornamental clients or focus more on the agricultural crop market, the residue products produced by the Onsite digester technologies will provide a large portion of the raw materials for our organic products line” said Jim Reinertson, COO of Purely Organic Products.

The Joint Venture with Purely Organic Products will expand the Company’s portfolio of sustainable, environmentally-friendly products generated from problematic organic waste streams and is a continuation of the company strategy to grow business through synergistic relationships.

About Onsite Power Systems

Onsite Power Systems, Inc (www.onsitepowersystems.com) is dedicated to provide economically and environmentally sound solutions for organic waste recovery while creating alternative and sustainable renewable fuels and value added products. The company is taking a leadership role in commercializing advanced anaerobic digestion technologies while shaping new models for organic resource recovery, renewable energy and environmental stewardship.

About Purely Organics

Purely Organic Products (www.purelyorganiclawncare.com) is an organic fertilizer product company that uses a combination organic products, creating a wide range of cost effective and versatile organic fertilizer products that are Eco-friendly and composed of natural ingredients increasing ecological health and eliminating environmental risks.
